

MANIFESTO for SUSTAINABILITY

LATTERIA
LIVIGNO

LATTERIA
LIVIGNO

For over 60 years, we at Latteria di Livigno have been looking to the future while holding firm to the values that have always distinguished us: We promote the development of the **mountain environment** and its **economy** with **passion and experience**, combining respect for tradition with modern production technologies.

Our Latteria is surrounded by high altitude mountain pastures and green wooded areas, in a territory where man and nature coexist in **harmony**.

Always striving to maintain this balance, over the years we have introduced **energy-saving systems**, the **use of energy from renewable** sources, water recycling and reuse, and we have implemented **strict controls** for the production of milk and its related products.

Today, in the face of the social and environmental changes we are experiencing, we want to **respect and safeguard our land and environment** with renewed commitment.
For ourselves and for future generations.

To create greater awareness of the strategic theme of sustainability, we are presenting our project by publishing the first **MANIFESTO FOR SUSTAINABILITY of LATTERIA DI LIVIGNO**, which encapsulates our commitment to responsible and sustainable growth.

THE GOAL

For Latteria Livigno and its dairy farmers, sustainability is not an abstract concept, but it represents a value and a concrete commitment that we share with our employees, our customers and our guests.

For this reason, we have set out on a path towards the Sustainable Development Goals (SDGs), identifying the sustainability mainstays that inspire our business and our people. With these goals in mind, we will continue our efforts in the coming years:

- RESPONSIBLE CONSUMPTION AND PRODUCTION
- SUSTAINABLE AGRICULTURE PROMOTION
- CLIMATE ACTION

THE METHOD

We have introduced new control systems and continue to search for solutions to build a sustainable production system for the benefit of our community and land.

THE MISSION

Ensure production in line with our values, which respects people and land, while preserving the balance with the environment.

THE MODEL BY WHICH WE ARE INSPIRED

The compliance of Latteria Livigno's sustainability strategy with 2030 Agenda guarantees that our actions are coordinated with the idea of sustainability developed by international institutions and contribute to common and shared goals.

Halve the per capita of global food waste at the retailer and consumer levels and reduce food losses during production and supply chain.

Achieve sustainable management and efficient use of natural resources.

Significantly reduce the production of waste through prevention, reduction, recycling, and reuse.

Promote an eco-friendly management of all types of forests, halt deforestation, restore degraded forests and significantly increase reforestation and afforestation everywhere.

Ensure the conservation of mountain ecosystems, including their biodiversity, in order to improve their capacity to produce benefits essential for sustainable development.

Considerably increase the percentage of renewable energy in total energy consumption.

OUR MANIFESTO

WE BELIEVE IN ETHICAL AND ENVIRONMENTAL RESPONSIBILITY
as a value that inspires our production and commercial choices.

WE BELIEVE IN THE BOND WITH OUR TERRITORY
as a unique expression of a **heritage of traditions**,
history, culture which must be protected and safeguarded.

WE BELIEVE IN GENUINENESS AND NATURALNESS
which translate into attention to animal welfare
and to the quality of our products.

WE BELIEVE IN CONTROLS THAT GUARANTEE SAFETY,
and motivate us to always give our best.

WE BELIEVE IN SMART EFFICIENCY,
in using **green energy**,
reducing plastic and waste
and in reusing internal resources to reduce emissions.

WE BELIEVE IN SOCIAL RESPONSIBILITY
in promoting and supporting the community and local producers.

LATTERIA
LIVIGNO

Water is a precious resource, that's why within our production processes we have activated a programme for the recycling of the water used during production, which is stored and reused for the washing of the machineries.

2006

We heat our production area by using the heat generated by the engines which refrigerate our aging cells.

2011

We install photovoltaic panels which generate part of the energy we need for our production and daily work, reducing energy consumption.

We start the renewal process for our packaging, to introduce new materials with a reduced environmental impact. We activate a supply contract for green energy. Thanks to this, our energy consumption is fully covered by guarantees of origin, which certify the production and use of energy from renewable sources.

2018

We equip ourselves with a private well. The water we use comes from it, to respect and protect water resources.

2019

We promote sustainable mobility: We install electric vehicle charging stations for cars, motorbikes, and bicycles for our guests.

We introduce the procedural guideline of Certified Industry Vallivigno for the production of "Eroe", which certifies the origin of the milk, the type of feed used for our livestock, and the non-use of GMO feeds.

2021

2022

We introduce the use of r-PET (recycled PET) in our packaging for milk, yoghurt and SAOR, with a guaranteed minimum recycling rate of 50%.

Our sustainable growth path continues with the introduction of the Manifesto for Sustainability, which highlights the values and mission that will lead us in the coming years.
